EDUCATION

Maharaja Agrasen Institute of Technology (MAIT) *2025 – 2029*
Bachelor of Technology in Computer Science & Engineering | CGPA: 9.2

The Katara Hills School, Bhopal
Class X | 94%

Government Boys Senior Secondary School, Rajokri, Delhi
Class XII | 84%

EXPERIENCE

Technical Executive — CSI-INNOWAVE

- Collaborated with the core team to drive outreach and promotion strategy for the society orientation event Zypher '26, working to maximize participant reach and engagement.
- Sourced and contacted 20+ potential technical speakers via email for the event, securing confirmed interest from an industry speaker.

PROJECTS

Particle Playground *C++ / SFML*
Repo (includes demo clip): github.com/Som-Kashyap/Particle-Playground

- Built a real-time interactive particle sandbox capable of simulating 200,000+ particles across six distinct modes (Magical, Freefall, Constrained, Wave, Freeze, Fireworks).
- Implemented customizable effects including adjustable spawn rate, dynamic and firework color palettes, gravity toggling, and a twinkling particle effect, alongside a full controls panel UI.

Array Visualizer *JavaScript / HTML / CSS*
Live Demo: som-kashyap.github.io/Array-Visualizer | Repo: github.com/Som-Kashyap/Array-Visualizer

- Developed an interactive web application to visualize core array operations — push, pop, search, and length/sum/first/last element display — through a clean, intuitive UI.
- Built entirely with vanilla JS DOM manipulation to render live updates as operations are performed.

Operation Iron Wall *C++ / SFML — Game*
Repo (includes demo clip): github.com/Som-Kashyap/SFML-Projects/tree/main/SFML-Operation-Iron-Wall

- Developed a side-scrolling defense game where the player protects a tank from waves of enemy soldiers and rocket-firing drones, built to strengthen OOP and real-time game development skills.
- Implemented enemy AI, a drone projectile system, and collision detection, alongside player/tank health and kill-count systems.
- Built sprite sheet animations, delta-time based movement, and a modular animation/text class architecture, plus full menu, pause, and game-over screen flow.

CERTIFICATIONS & ACHIEVEMENTS

- AzinHack '26 — Placed among the top 40 teams out of 650+; built CarbonLedger, a deterministic Python engine for calculating Scope 1/2, precursor, and total emissions and emissions intensity for a firm's reporting period.
- DecodeSIH '26 — Worked on a disaster management project focused on prediction, safe navigation, and alerting relief forces.
- Deloitte Australia — Data Analytics Job Simulation (Forage)
- Participant, Adobe University Hackathon 2026

TECHNICAL SKILLS

Languages & Tech: C, C++, Python, HTML, CSS, JavaScript, Express.js, Git, GitHub

Problem Solving: 210+ problems solved on LeetCode; Data Structures & Algorithms coverage through Graphs
